DETAILED ACTION

Receipt is acknowledged of the preliminary amendments filed 10/22/02 and 05/06/03.

Claim Objections

Claims 7, 8, 15, 16, 19, 20, 28, and 29 objected to because of the following informalities:

Claims 8, 16, 20 and 29 are identical to claims 7, 15, 19, and 28, respectively. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11, 13-20, 22-24, 26-27, 30-33 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Peterson et al.

Peterson et al disclose a pressure sensitive adhesive composition comprising a poly(amino acid), and extraneous protein and a free radical scavenger (antioxidant) (see col. 6, lines 18-30). The free radical scavenger may be gallate, BHA, or ascorbic acid (Vitamin C). The poly(amino acid) may be complexed with organic or inorganic fillers including apatite (see col. 5, lines 28-31). Sterilization of the composition can occur either by radiation at a dose of 1 to about 3 mRad (col. 6, lines 23-24) or at a low

temperature as taught at col. 6, lines 33-34. The drop in the molecular weight of the claimed polymers subsequent to exposure to heat or radiation is an inherent property of the biodegradable polymers claimed since the same polymers are disclosed for use on the preparation. Formation of the polymer composition occurs at a temperature of from about 4 to about 60 C. The instant claims are clearly anticipated by Peterson et al.

Claims 12, 21, 22, 25, 28, and 29 are objected to as dependent upon a rejected base claim.
